

Peer Review for

Linda Ott Olander

by Pär Eriksson and Oskar Emilsson

As you had not been able to finish the tasks before the peer review deadline, there is really not so much to review. But we will give some feedback on what you have implemented.

We did not have the possibility to test your source code in any easy way (as we are both using Linux, and did not have time to get any C# environments setup), so we could only look at the source code in your repository.

You have implemented the `Stand` operation well, and we couldn't find anything strange about that.

It looks like you have worked on the hidden dependencies between the view and the controller, but it seems to still be there. If you would need to change the actual key (character) for a menu choice, you still have to change it both in the presentation, as well as in the controllers `if`-block.

As of writing this, it says you are currently working on the "Soft 17" rule variant, and as far as we can tell, the strategy pattern is followed correctly. But the rule is not finished according to the task description.

You will obviously have to work on the uncompleted tasks to get a passing grade, but we are pretty sure that you are already aware of that.
